**WHERE IT GOES**  
This part in colour, its neighbours in grey

**HOW TO MAKE IT AND HOW IT FITS**

Cut twelve lengths of 876 mm from four 10 ft pipes (three per pipe).  
Thread one end 3/4 in NPT (rented pipe threader); ream and deburr.  
Clean off cutting oil with degreaser: oil smokes on first heat.  
Coat the thread with nickel anti-seize (no PTFE tape or paste) and screw on the cap hand tight plus one and a half turns.  
The open top end is square cut and deburred so a heater slides in.  
Fit: the cap stands on a levelled 14 mm first lift of sand; the template and then the lid hold the top, which ends 25 mm above the lid.  
Each 508 mm heater rests on the cap inside, its heated part 26 to 483 mm above the drum floor; its leads rise out of the open top.  
Check: length 876 mm plus cap, within 3 mm; a 16 mm rod slides to the bottom freely.
